

*Secure your "Pole" Position*

**with Giantpole + Tripole**

# Show the flag!

Even if there is no wind, the crossbar ensures that your graphic can be clearly seen from a considerable distance away Telescopic flag pole

Your advertising display will never go unnoticed with the mobile flagpole pedestals – Giantpole and Tripole. These high-rising flag systems are a real public attraction, particularly at open air events! Flexible in application and quick to mount, they are absolutely reliable in standing up to the tough conditions in the daily competitive field - you can really show the flag with Giantpole and Tripole!

Giantpole and Tripole are ideal for a wide variety of applications, particularly outdoors. They ensure that your promotions and events remain the centre of attraction. You decide on the height you want. 5.40 m with the Giantpole or 4.00 m with the Tripole are now the trend-setting standards.

Giantpole and Tripole are wind and weather-proof. The stable pedestal ensures their secure positioning. You only have to place the pedestal in the required position and fill it with water or sand. In this way your flag is mounted quickly and securely!

Wind velocities of up to 14 m/sec. – corresponding to wind force 7 – will have no effect on the system. After all, Giantpole and Tripole have been tested in the wind tunnel and certified by the TÜV-for your additional safety.

And you can also rely fully on the material. Made from anodized high-quality aluminium, these flags can be used for years without any problems – rust is something we have never encountered.

## Giantpole
